Hills Reliance

The Best Choice in Business Security

**You have worked hard to build your business.
Protecting it is a high priority.**

Hills Industries designed the Reliance Security System using the most advanced technology available. Designed to meet the demands of safeguarding your personnel, property and assets. The Hills Reliance offers you extraordinary power coupled with simplicity of use. This powerful controller is ideal for commercial applications and is expandable to meet the demands of growing businesses.

Hills Industries are proud to have provided quality products to secure Australian businesses and homes for well over twenty years. Let us show you real peace of mind.

The Hills Reliance – Keeping your business safe and protected.

One Choice to protect your business and assets

Perfect for Your Business:

Commercial, Retail, Warehousing and Industrial

Expandable to 128 zones, 99 users, 8 areas and 24 code pads the Hills Reliance offers you great flexibility to have system tailored specifically to your individual requirements. Uniform operation across all Hills Reliance models ensures familiarity and simplicity at home and work.

Automatic Protection

Automatic System Arming and Disarming maintains system integrity without user intervention. The Smart Auto Arm feature ensures no personnel remain in the area that is to be armed by checking movement sensors for recent activation prior to arming. Automatic System Partial arming secures the perimeter of your system whilst still allowing free movement within the protected area.

Advanced Features

Adding proximity readers gives you the benefit of staff control and provides keyless entry to individual areas within your business. Inactivity Detection ensures reliable operation by monitoring signals from selected sensors, and will alert you if any device fails to operate during the pre-programmed test time period.

Build your business on solid foundations

With up to 8 programmable areas, and 128 zones, the Hills Reliance offers superior customisation to suit even the most complex of installations.

Up to 99 User PIN codes may be created with a variety of authority levels. The allocation and authority of these pin codes can be controlled by a designated master user(s) or handled via individual department managers.

Authority levels:

- gives users access between selected times
- control the areas that can be accessed by a staff member
- determine the user's ability to bypass (turn off) certain zones
- provide selected users with the ability to enter and delete user pins

In the event of an emergency, a signal can be reported to a 24hr alarm monitoring center via the Hills Reliance. The monitoring centre then action the alarm signal and respond with the appropriate service.

Your Reliance Security System Grows With Your Business

Hundreds of different programmable options allow you to customize your new security system based on your requirements. And just like your business, the Hills Reliance can grow to meet your changing needs.

Add functionality as you need it, where you need it.

Optional Accessories Include:

- **Wireless Expanders and Sensors** – add additional detection devices in hard-to-cable locations to boost your security coverage.
- **Card Readers** – open doors and access secure areas by presenting a card to a reader
- **Additional code pads** – select from a range of LED, Icon, and full English LCD code pads as well as the new VoiceNav code pad.
- **VoiceNav security code pad** - operating your security system is even easier with the VoiceNav's interactive Personal Voice Guide (PVG). The PVG will walk you through system operation, one step at a time, from arming your system to changing the time. No more confusing blinking lights - just clear, precise voice instructions.
- **Keychain Remotes** – stylish remotes are available to arm/disarm your system with a single button press. These can also be used to open gates and garage doors, and turn lights or other devices on and off.
- **Zone Expanders** – add extra zones to your system allowing cost effective upgrades as required.
- **Output and Relay Expanders** – control a variety of other external devices.
